

Linear Hall-effect Sensor ICs: SS490 Series

055843
Issue 2

Datasheet

DESCRIPTION

The SS490 Series are small, versatile, linear Hall-effect devices which are operated by the magnetic field from a permanent magnet or an electromagnet. The ratiometric output voltage is set by the supply voltage and varies in proportion to the strength of the magnetic field. The integrated circuitry provides increased temperature stability and sensitivity. Laser-trimmed, thin film resistors provide high accuracy (null to $\pm\%$, sensitivity up to $\pm 3\%$) and temperature compensation. They respond to either positive or negative Gauss, monitoring either or both magnetic poles. The quad Hall sensing element minimizes the effects of mechanical or thermal stress on the output. The positive temperature coefficient of the sensitivity ($+0.02\%/\text{ }^\circ\text{C}$ typical) helps compensate for the negative temperature coefficients of low-cost magnets, providing a robust design over a wide temperature range. Rail-to-rail operation (over full voltage range) provides a more usable signal for higher accuracy. These products have an operating temperature range of $-40\text{ }^\circ\text{C}$ to $150\text{ }^\circ\text{C}$ [$-40\text{ }^\circ\text{F}$ to $302\text{ }^\circ\text{F}$], appropriate for industrial and automotive environments. The SS490B versions offer cost-effective sensing solutions with wider null and sensitivity tolerances, and a wider drift over temperature than the SS490A higher performance products. Both the SS490A and SS490B versions have a typical sinking or sourcing output of 1.5 mA continuous, use 7 mA supply current at 5.0 V at $25\text{ }^\circ\text{C}$ [$77\text{ }^\circ\text{F}$], and provide predictable performance over the full temperature range. For design flexibility, these products are available in the following flat TO-92 package styles:

- **SS4XX:** Straight standard leads, bulk pack
- **SS4XX-L:** Straight long leads, bulk pack
- **SS4XX-T2:** Formed leads, ammopack tape-in-box
- **SS4XX-T3:** Straight standard leads, ammopack tape-in-box
- **SS4XX-S:** Surface mount, bulk pack
- **SS4XX-SP:** Surface mount, pocket tape and reel

FEATURES

- Linear output for circuit design flexibility
- Quad-Hall IC design minimizes mechanical stress effects
- Responds to either positive or negative Gauss
- Uses 7 mA at 5 Vdc for energy efficiency
- Single current sinking or current sourcing output
- Rail-to-rail operation provides more usable signal for higher accuracy
- Temperature-compensated magnetics help provide stable operation over a wide temperature range of $-40\text{ }^\circ\text{C}$ to $150\text{ }^\circ\text{C}$ [$-40\text{ }^\circ\text{F}$ to $302\text{ }^\circ\text{F}$]

POTENTIAL APPLICATIONS

Industrial:

- Basic current sensing for motor load monitoring, detection
- Anti-tampering magnetic field sensor in smart remote utility meters
- Pump control in heavy-duty equipment and household appliances
- Simple linear or angular displacement sensing
- Handlebar/throttle position sensing in e-bikes and scooters
- Current sensing in appliances
- Speed adjustment trigger in tools and appliances
- Magnetic code reading in safes, security and building access control systems

Medical: Position sensing in infusion pumps

PORTFOLIO

The SS490 Series and the SS39ET, SS49E, SS59ET Linear Hall-effect Sensor ICs form Honeywell's Linear Hall-effect Sensor IC offering.

Linear Hall-effect Sensor ICs:

SS490 Series

Table 1. General Specifications for All Catalog Listings ($V_s = 5.00\text{ V}$ with $4.7\text{ k}\Omega$ output to minus, $T_A = -40^\circ\text{C}$ to 125°C [-40°F to 257°F])

Characteristic	Condition	Min.	Typ.	Max.	Unit
Supply current	$T_A = 25^\circ\text{C}$ [77°F]	—	7.0	8.7	mA
Output current: sourcing sinking sinking	$V_s > 4.5\text{ V}$ $V_s > 4.5\text{ V}$ $V_s > 5.0\text{ V}$	1 0.6 1	1.5 1.5 1.5	— — —	mA
Response time	—	—	3	—	
Output voltage swing: VOM- VOM+	-B applied +B applied	0.4 $V_s - 0.4$	0.2 $V_s - 0.2$	— —	
Supply voltage	$T_A = -40^\circ\text{C}$ to 125°C [-40°F to 257°F]	4.5	5.0	10.5	V
Operating temperature	—	-40 [40]	—	150 [302]	$^\circ\text{C}$ [$^\circ\text{F}$]
Soldering temperature and time	wave soldering process: 250°C to 260°C [482°F to 500°F] for 3 s max. infrared reflow process: peak temperature 245°C [473°F] for 10 s max.				

Table 2. Absolute Maximum Specifications for All Catalog Listings

Characteristic	Symbol	Condition	Min.	Typ.	Max.	Unit
Supply voltage	V_s	—	-0.5	—	11	V
Output voltage	V_{out}	—	-0.5	—	11	V
Output current	I_{out}	sourcing or sinking	—	—	10	mA
Operating temperature	T_A	—	-55		150	$^\circ\text{C}$ [$^\circ\text{F}$]
Storage temperature	T_S	$V_s = 0$	-55	—	165	$^\circ\text{C}$ [$^\circ\text{F}$]

NOTICE

Absolute maximum ratings are the extreme limits the device will momentarily withstand without damage to the device. Electrical and mechanical characteristics are not guaranteed if the rated voltage and/or currents are exceeded, nor will the device necessarily operate at absolute maximum ratings.

NOTICE

The magnetic field strength (Gauss) required to cause the switch to change state (operate and release) will be as specified in the magnetic characteristics. To test the switch against the specified limits, the switch must be placed in a uniform magnetic field.

Table 3. Specifications for Catalog Listing SS494B ($V_s = 5.00\text{ V}$ with $4.7\text{ k}\Omega$ output to minus, $T_A = -40^\circ\text{C}$ to 125°C [-40°F to 257°F])

NOTICE

Products ordered in bulk pack (plastic bag) may not have perfectly straight leads as a result of normal handling and shipping operations. Please order a tape packaging option for applications requiring straight leads.
