■ Guideline for Soldering

Static electricity: This product is based on LED design, LED is sensitive to static electricity, static electricity and surge will cause LED characteristics to change, such as forward voltage reduction, etc., if the situation is serious, or even destroy products. So do not touch the pin directly. When installing or using, the relevant equipment and machine should be properly grounded, and other measures must be taken to prevent static electricity and surge. The use of antistatic bracelets, anti-static mats, antistatic work clothes, working shoes, gloves and anti-static containers are effective measures to prevent static electricity and surge.

Storage: attention should be paid to preservation. If the preservation condition is not good, the adhesion force between the reflecting film and the reflecting cavity will be reduced. The recommended storage conditions are: temperature (25 ± 10), humidity (65 ± 20)%RH.

Welding: the welding temperature is 260 and 5 C, the welding time is less than 3 seconds, the welding power is less than 30W, and the welding point should be more than 1.6mm.
