

Features

- Exceeds Requirements of Full Duplex EIA-485 Standard
- Hot Plug Circuitry - Tx and Rx Outputs Remain Three-State During Power-up/Power-down
- Supply voltage: 3.0V ~ 5.5V
- Input Common-mode Range: -7V ~ +12 V
- Data Rate: 32Mbps
- Up to 256 Nodes on a Bus (1/8 unit load)
- Full Fail-safe Receiver (Open, Short, Terminated)
- Bus-Pin Protection:
 - ±20 kV HBM ESD
 - ±12 kV IEC61000-4-2 Contact Discharge
 - ±15 kV IEC61000-4-2 Air Discharge
- -40°C to 125°C Operation Temperature Range

Description

The TPT480 and TPT482 is IEC61000 ESD protected, which support ±12 kV IEC contact and ±15 kV IEC air discharge. 3.0V ~ 5.5V transceivers that meet the RS-485 and RS-422 standards for Full Duplex communication.

Transmitters in this family deliver exceptional differential output voltages into the RS-485 required 54Ω load. The devices have very low bus currents so they present a true “1/8 unit load” to the RS-485 bus. This allows up to 256 transceivers on the network without using repeaters.

Receiver (Rx) inputs feature a “Full Fail-Safe” design, which ensures a logic high Rx output if Rx inputs are floating, shorted, or on a terminated but undriven bus.

The TPT480x is designed for full-duplex RS485, and support SOP8, DFN3X3-8 and SOP14 package, which is characterized from -40°C to 125°C.

Theory of Operation

General description

The TPT480/482 is a Full-Duplex RS-485/RS-422 transceivers with robust HBM and IEC 61000 ESD protection. The device build in fail-safe circuit, when the receiver input is open or shorted, or idle mode, it will generate a logic-high receiver output. The TPT48x supports hot-swap function allowing line insertion to avoid wrong data transmission, and optimizes the drivers slew-rate to minimize EMI and reduce reflections caused by different terminated cables, then TPT48x can support the high communication speed up to 32Mbps.

The TPT48x operates from a single +3.3V to 5.0V power supply, the driver is designed with output short-circuit current limitation, together with thermal-shutdown circuitry to protect drivers in the status of excessive power dissipation. In active mode, the thermal-shutdown circuitry places the driver outputs into a high-impedance state.

In the typical RS485 communication, twisted-pair lines are connected backward in the network.

Application Information

Figure 8. Typical RS485 communication network with enable function

The TPT480 transceiver is designed for bidirectional RS485/422 data communications on multipoint bus transmission lines. Figures 8 shows typical network applications circuit to support up to 256 nodes. To minimize line reflections, terminate the line at both ends in its characteristic impedance, one 120ohm load in master side, and another 120ohm load in the end of slave side, and limit stub lengths off the main line as short as possible.
