Recommended components and values:

Components	TD041S232H
TVS1, TVS2	SMCJ15CA
R1, R2	12Ω/2W(Wire-wound resistor)
GDT1, GDT2	S30-A90X

When the module is used in applications with harsh environment, it can be susceptible to large energy like lightning strike, etc. in which case, it is essential to add an adequate protection circuit to the 232 signal ports to protect the system from failure and maintain a reliable bus communication. Figure 9 provides a recommended protection circuit design for high-energy lightning surges, with a degree of protection related to the selected protection device. Parameter description lists a set of recommended circuit parameters, which can be adjusted according to the actual application situation. Also, when using the shielded cable, the reliable single-point grounding of the shield must be achieved.

Note: The recommended components and values is a general guideline only and must be verified for the actual user's application.

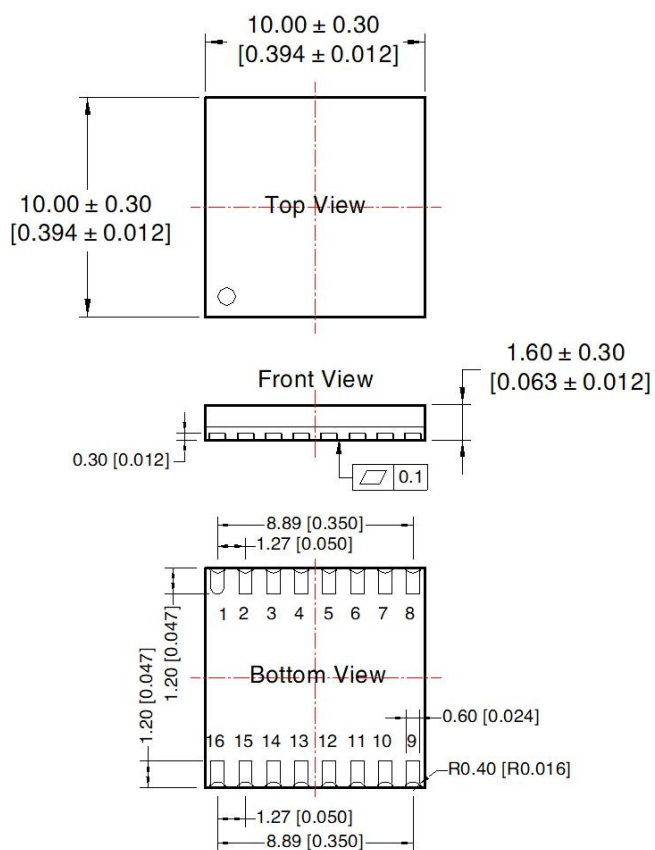

Recommendations

- ① Hot-swap is not supported.
- ② If the external input of TXD is insufficient, the pull-up resistor should be added according to the situation.
- ③ Refer to *IPC 7093* for the welding process design of this product. For detailed operation guidance, please refer to *Hot Air Gun Welding Operation Instruction for DFN Package Product* or *Welding Operation Instruction for DFN Package Product*.
